

# FasTrack Web: A *Body Shop Cost Recovery System*

## What is FasTrack Web?

***FasTrack is an easy-to-use, web base application designed to assist body shops and dealerships in recovering the cost of the body repair clips and fasteners used in daily collision repairs.***

## Why was FasTrack Web created?

In the past the cost of fasteners used in collision damage repair was often an expense that was not recovered by body repair shops. Insurance companies considered these items "a cost of doing business" and were either reluctant or refused to pay claims for these items unless they were presented an itemized invoice detailing the cost of these items for each vehicle repair order.

Many body shop repair technicians were unwilling to take valuable time away from actual repair to prepare these detailed invoices. As a result these items were often not invoiced and ultimately cost the body shop hundreds of dollars a week. With the help of FasTrack, these once profit draining parts can now become a source of additional income for your body shop.

- An extensive data base of over 10,000 collision repair fasteners by Auveco the leader in body hardware!
- Data includes all the applicable OEM part numbers with the latest OEM pricing.
- System bills out at the manufacturer specific OEM price providing a standardized cost basis preferred by insurance companies.
- The application can be accessed from any computer with internet access, a browser such as Internet Explorer or Firefox, and a valid login.
- Functions allowing distributor to add multiple items or use the system with the distributor's unique part numbering system instead of the Auveco number at the body shop level.
- Ability to be used with Barcode Scanning devices and our data collection application
- Reporting features that allow the distributor to gather usage information on what is moving at the shop level for his supported shops
- Shop level ability to add unique items such as sand papers, glue, tape, etc. to their personal data set
- New features are added frequently with no time-consuming updates or additional investment
- All user data input is secured with Verisign internet security

### **Socket Mobile Windows Based Scanner:**

Comes Pre-loaded with an Auveco developed Data Collection application

The data collection routine is designed with bar-code recognition intelligence that makes remote data collection fast and simple.

Capable of storing several days work before docking and downloading is required.

Windows sync technology seamlessly runs the Transfer Utility.

The Transfer Utility includes an application that allows user to print their own bar-code labels for anything in FasTrack web including your own personal items.
